

## We're looking at patient comfort from a new angle.

Gebauer Company, the most trusted name in skin refrigerants for more than 100 years, is introducing a multi-directional aerosol can application for Gebauer's Ethyl Chloride® topical anesthetic skin refrigerant.

The ACCU-STREAM 360™ with Sure Lock Technology™ is an innovative delivery system that allows physicians to easily spray affected areas from almost any angle — even upside down — streamlining the application process. Gebauer Company products are the only topical anesthetic skin refrigerants cleared by the U.S. Food and Drug Administration (FDA) for pre-injection anesthesia and for use to control pain prior to minor surgical procedures, such as in-grown toenails and incision and drainage of small abscesses.

Gebauer's Ethyl Chloride is now available in the new ACCU-STREAM 360 Fine and Medium Stream cans, joining the current aerosol mist can and the familiar brown glass bottles. Now putting your patients at ease has never been easier!

### New Delivery System

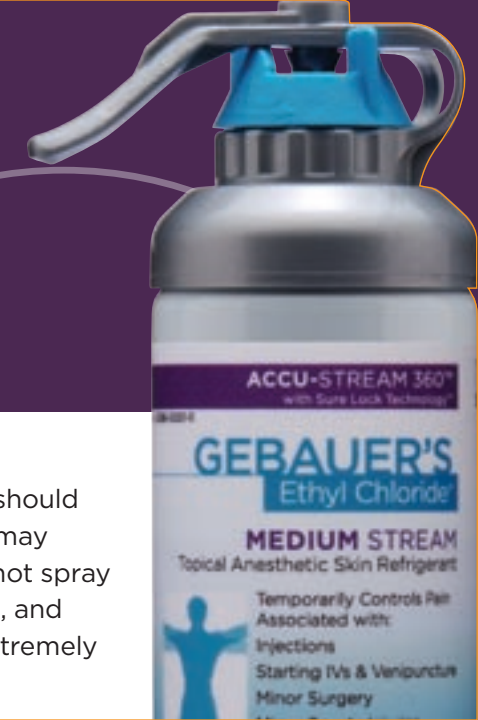

The can may be sprayed upright, upside down or any angle in between.

Easy-to-use safety locking ring prevents accidental spraying.

### Important Risk and Safety Information for Gebauer's Ethyl Chloride®:

Published clinical trial results support the use in children 3 years of age and older. Ethyl Chloride is FLAMMABLE and should never be used in the presence of an open flame or electrical cautery equipment. Inhalation should be avoided as it may produce narcotic and general anesthetic effects, and may produce deep anesthesia, fatal coma or cardiac arrest. Do not spray in eyes. Over spraying may cause frostbite. Freezing may alter skin pigmentation. The thawing process may be painful, and freezing may lower resistance to infection and delay healing. Cutaneous sensitization may occur, but appears to be extremely rare. Long-term exposure may cause liver or kidney damage. Rx Only.

Gebauer's Ethyl Chloride® temporarily controls the pain associated with needle and minor surgical procedures.
