INTRODUCING

BD Vacutainer®
 Push Button Blood Collection
 Set with Pre-Attached Holder

Helping all people
 live healthy lives

Safety from End to End

Needle Safety

The **BD Vacutainer® Push Button Blood Collection Set with Pre-Attached Holder** helps guard against costly, potentially debilitating needlesticks, allowing caregivers to focus on superior patient care.

Safety with the push of a button

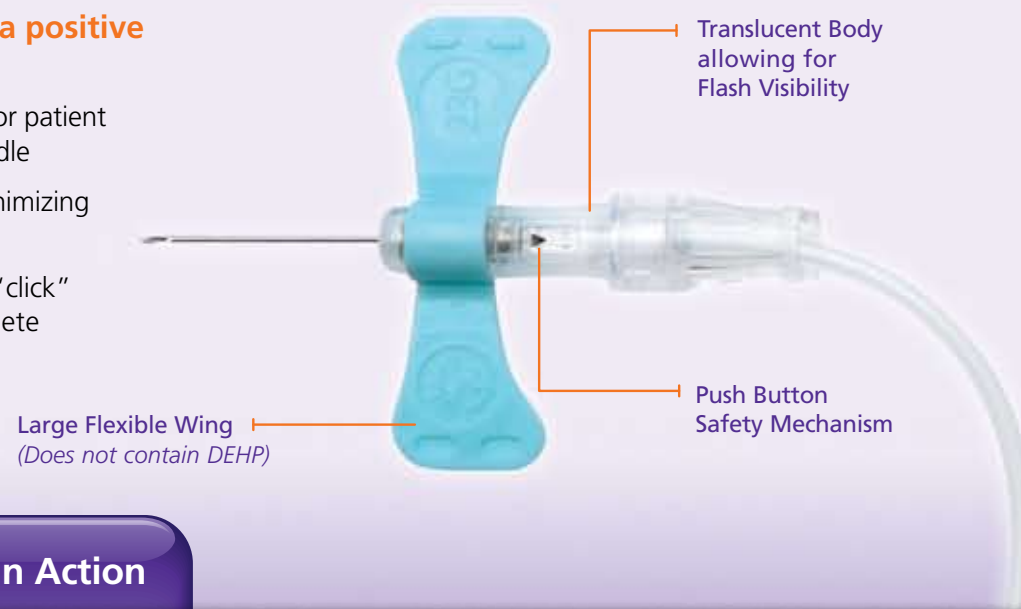

- Provides split-second protection against needlestick injury
- Clinically demonstrated to reduce accidental needlestick injuries by **88%** with zero injuries in the final 21 months of the study¹
- Ease of use reduces training requirements and is designed to improve activation compliance
- Mitigates significant costs associated with needlestick infections

One-handed safety activation

- Allows for easy activation of the safety mechanism while attending to the patient/venipuncture site
- Intuitive design makes blood collection safer without compromising patient care

In-vein needle retraction for a positive patient experience

- Reduces the risk of professional or patient exposure to a contaminated needle
- Delivers easy activation while minimizing patient discomfort
- Telling patients that the audible “click” signifies the procedure is complete may improve patient experience

Holder Safety

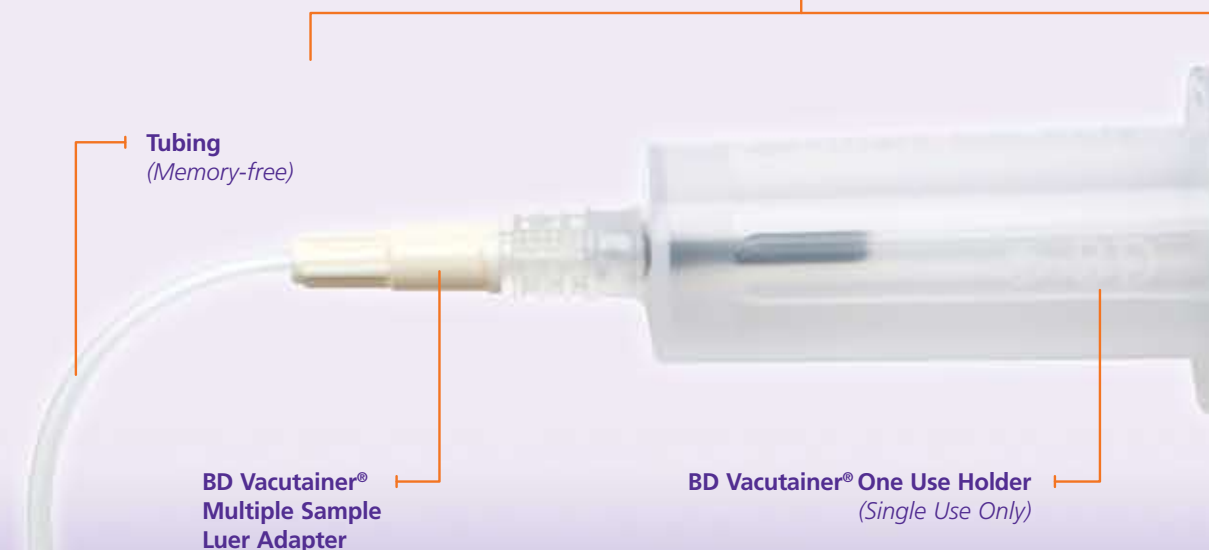

The **BD Vacutainer® Push Button Blood Collection Set with Pre-Attached Holder**

- ▶ **Safety**
Pre-attached holders minimize the risk of accidental needlestick injuries
- ▶ **Compliance**
Pre-attached holders are compliant with OSHA's single-use mandate²
- ▶ **Efficiency**
Pre-attached holders eliminate steps in the phlebotomy process

Now Available with Convenient Pre-Attached Holder

According to a recent National Phlebotomy Association study, 99% of the blood collection tube holders evaluated had been contaminated with blood — putting both sample quality and worker safety at risk.³

In 2003, an OSHA Safety and Health Bulletin prohibited the re-use of tube holders. **BD Vacutainer® Push Button Blood Collection Sets** are equipped with pre-attached disposable holders to protect caregivers from back-end needlesticks, offering an even higher level of safety.²

▶ Safety & Efficiency in Action

Memory-free tubing:
Tubing does not coil or curl

Before activation

After activation

Easy & flexible: Choose the technique that works for you

Flash visualization confirms venous access

Easy in-vein activation without additional patient discomfort

Needle retracts from the vein and locks into place, offering immediate protection against needlestick injury
