

BD BACTEC™ Blood Culture System

Safety Solutions

Your Safety is Our Concern

A blood culture bottle with a safety neck that works with standard adapters.

BD has taken the extra step to design a blood culture bottle that is compatible with standard and readily available safety adapters.

Helping all people
live healthy lives

Safety Solutions: A commitment to the safety of healthcare workers

Safety during blood collection

BD has taken the extra step to design a blood culture bottle that is compatible with standard and readily available safety adapters.

- Integrated safety solution eliminates the need to purchase less familiar, costly specialized adapters
- Improved workflow leads to concentration on correct blood collection practices, thereby improving safety and patient results (less contaminants)
- No additional inserts required for additional laboratory tests

Safety in the lab

Special safety devices, compatible with the long neck of the BACTEC bottles for sub-culturing of instrument positive vials

- Improved lab-worker safety
- Improved workflow

Special containers for safe transportation of BACTEC bottles via the pneumatic tube system

- Rapid transport of blood culture bottles to the lab
- Improved lab-worker safety

“Our phlebotomists are thrilled to move to BACTEC. They can now safely draw directly into the BACTEC bottle and not use SPS tubes or awkward and cumbersome adaptors.”
