

Breath Alert® PEAK FLOW METER

CS-0125 (Standard Range)

CS-0126 (Low Range)

Key Benefits

- Designed to measure asthma symptoms to enable early treatment of Asthma and COPD
- Complies with all major international standards for accuracy, reliability and repeatability
- Adult Range - 50-800 L/min
- Child Low Range - 50-350 L/min
- Re-usable mouthpiece can be easily cleaned and sterilized
- All components made from high grade materials
- Easy to use
- Individually tested
- Accuracy $\pm 7.5\%$
- 1-year warranty

**Making Breathing Easier
One Step At A Time**

Breath Alert®

The Breath Alert® Peak Flow Meter is used to measure peak expiratory flow rate (PEFR) which is the fastest speed a person can blow air out of the lungs taking in as big a breath as possible. It is useful in recognizing early warning signs of asthma attacks.

Measurement of PEFR can be used to:

- determine the severity of asthma or COPD
- check a patient's response to treatment
- warn health care providers of worsening lung function in the absence of discernible symptoms
- identify asthma triggers and diagnose exercise-induced asthma
- provide markers for specific actions in a "Self Management Plan"

The Breath Alert® Peak Flow Meter is an important part of any asthma management plan.
