

Aluminum Finger Splint (Cot)

Product description

Formedica's aluminum splints allow to immobilize temporarily fingers and wrist in case of sprain or fracture. Their aluminum side provides the necessary rigidity and their foam side ensures patient's comfort.

Fold evenly over the finger to provide stabilization and protection.

Characteristics

- Made of malleable aluminum, padded with foam
- Radiolucent
- Easy removal for cleaning or examination purposes
- Splint model must be chosen according to the type of fracture and degree of immobilization required
