

SurGuard[®]2 Safety Needles & Syringes

Needle Protection Systems Avoid a Stick with a Single Click

The perfect solution to your safety compliance issues, SurGuard2 meets OSHA regulation for a sharps device with a built-in safety feature.

SAFETY

- Unique needle locking mechanism helps reduce risk of needlestick injury
- An audible click¹ indicates device activation

EASE OF USE

- One-handed activation
- Simple, intuitive, no complicated mechanisms

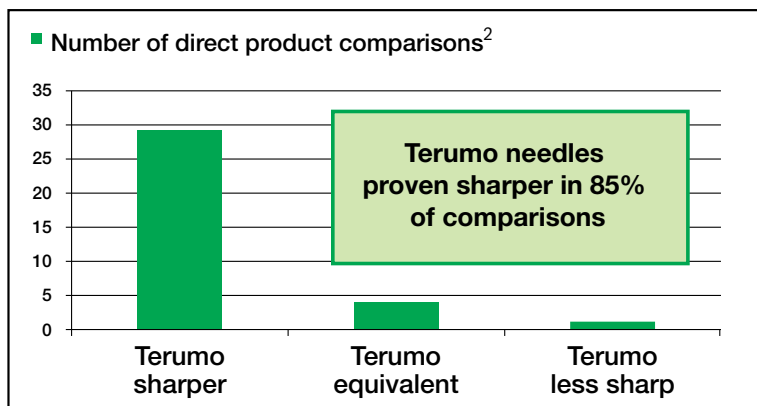

CONVENIENCE

- Small, compact packaging reduces waste
- Broad product line, includes 25Gx1½" and 30Gx½" safety needle

LOW COST

- Offered as needle-only or combination product

All Competitors

² In Independent laboratory testing, Terumo needles were shown, on average, to be the sharpest among brands tested:

- 10% sharper than BD (22G - 30G)
- 16% sharper than Covidien (22G - 27G)

When you think hypodermics...
Think sharp. Think Terumo.

SurGuard[®]2 Safety Needles & Syringes

Prior to Activation: Sleek, thin, more streamlined sheath. Ratchet mechanism allows for positioning of sheath so it does not obscure injection site. Standard hub fits all Luer Lock and Luer Slip syringes. Bevel-up, sheath right needle orientation allows for low-angle injections.

After Activation: Needle remains fully engaged under locking mechanism.

PRODUCT PREPARATION

1. Securely attach SurGuard2 needle to syringe with a push and clockwise twist motion. For syringe with needle, be sure to tighten assembly firmly before use.

2. Move sheath away from the needle to an approximate 90° angle. Sheath will remain as set.

3. Remove needle cover carefully by pulling straight off. Do not twist.

PRODUCT ACTIVATION

POSITION

1. Position sheath about 40°-45° to a hard, flat surface.

LOCK

2. With a FIRM, quick motion, press down against a flat surface until an audible click is heard.

¹NOTE: Audible click may not be heard on small needle sizes; visual confirmation is required.

CONFIRM

3. Visually confirm that the sheath is fully engaged.
