

PRODUCT FEATURES

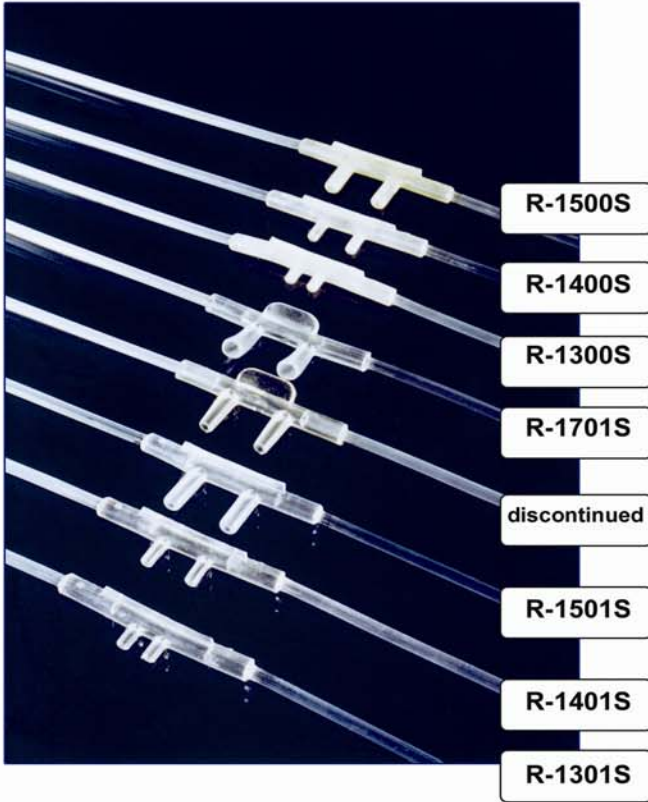

ASSURING HIGHEST PRODUCT QUALITY AND MAXIMUM
PATIENT COMFORT AND SAFETY

- **RAW MATERIALS:** Class VI equivalent, medical compounds: i.e. approved for food contact and medical devices (Compliance Certificates are available upon request).
- All raw materials, components, finished products and packaging are Latex-Free.
- 98% of raw materials originate in Canada
- **MASKS:** All masks molded in house from softer grade polymer with greater thickness making the masks suppler and more comfortable to wear.
- Elastic mask laces are wide for comfort and tipped for easy reinsertion if detached from mask.
- Mask adapters (aerosol and oxygen) are permanently bonded into masks to eliminate being detached during use.
- Mask nose clips made from dead soft aluminum for easy shaping and attached on both ends to prevent mispositioning or detachment.
- **TUBING:** All tubing extruded in house of the kink-resistant type, featuring 5 internal channels. Uneven number of channels reduces tendency to block oxygen flow when kinked.
- All tubing produced with light surface frosting to increase flexibility and reduce memory effect of coil, therefore, decreasing tendency to tangle and twist.
- Tubing end connectors molded from a softer grade polymer and shaped to provide maximum grip at connection points, yet easy to connect and disconnect.
- **CANNULA:** Respan's cannula products include straight tip, curved flared cannula in adult, pediatric and infant sizes. A special cannula product contains nasal prongs molded from Kraton®, a thermoplastic elastomer of extreme elasticity and softness with hypoallergenic characteristics, giving patients maximum comfort and minimum skin irritation under prolonged usage.
- **QUALITY ASSURANCE CERTIFICATES:** ISO 13485:2003, ISO 9001:2008 and EEC ANNEX V - CE mark
